THE INVENTION CLAIMED IS:

1. An electronic text and/or graphics presentation device including:

scanning means arranged to scan a pattern encoding text and/or graphics:

a user input control means;

processing means coupled to the scanning means and responsive to the user input control means and operatively programmed to generate a data signal corresponding to the text and/or graphics; and

a display means controlled by the processing means and arranged to display the text and/or graphics in response to the processing means.

- An electronic text and/or graphics presentation device according to claim
 including a foldable housing comprising first and second housing portions pivotal relative to each other.
- An electronic text and/or graphics presentation device according to claim
 wherein the first and second housing portions are each pivotally connected to a common spine.
- An electronic text and/or graphics presentation device according to claim
 wherein the spine includes a battery compartment.
- An electronic text and/or graphics presentation device according to claim
 wherein the pattern is formed on a card and said device includes a roller mechanism arranged to retract the card into said device.
- An electronic text and/or graphics presentation device according to claim
 wherein the pattern is formed on a card and said device includes a roller mechanism arranged to retract the card into said device.
- 7. An electronic text and/or graphics presentation device according to claim 6. wherein the roller mechanism is incorporated into the first housing portion.

- An electronic text and/or graphics presentation device according to claim
 wherein the first housing portion includes a window for observing a card retracted into the first portion.
- An electronic text and/or graphics presentation device according to claim
 , wherein the pattern encoding text and/or graphics is formed on a card and wherein said device further includes a card storage magazine.
- 10. An electronic text and/or graphics presentation device according to claim 2, wherein the pattern encoding text and/or graphics is formed on a card and wherein said device further includes a card storage magazine formed in the second housing portion.
- 11. An electronic text and/or graphics presentation device according to claim 2, wherein the display means comprises a flexible LCD screen located across inner surfaces of the first and second housing portions.
- An electronic text and/or graphics presentation device according to claim
 wherein the flexible LCD screen is bi-stable.
- 13. An electronic text and/or graphics presentation device according to claim 3, including a recess for receiving a loop of a flexible LCD screen upon pivoting the first and second housing portions to a closed position in order that creasing of the LCD screen is avoided.
- 14. An electronic text and/or graphics presentation device according to claim 2 wherein first and second printed circuit boards are located in the first and second housing portions respectively.
- 15. An electronic text and/or graphics presentation device according to claim 14, wherein the flexible LCD screen may include conductive traces coupling the first and second printed circuit boards to each other.

- An electronic text and/or graphics presentation device according to claim
 wherein the user input control means comprises a joystick assembly.
- 17. An electronic text and/or graphics presentation device including:

a scan head arranged to scan a pattern corresponding to text and/or graphics:

a processor coupled to the scanner and configured to generate data corresponding to the text and/or graphics;

a display screen responsive to the processor and arranged to display the text and/or graphics.

18. A method for distributing text and/or graphics comprising the steps of: encoding the text and/or graphics as a printed pattern on a plurality of cards:

distributing the cards to a plurality of users:

providing each of the users with an electronic text and/or graphics presentation device including means for converting the pattern into readable text.
